## Palisade Fencing

Aesthetic Appeal. Unparalleled Protection

### Features & Benefits

- Stronger than traditional security fences of chain link or wire mesh.
- Palisade fencing is made up of heavy duty steel welded pales that are secured vertically to a framework of specially formed rails and I beam posts.
- The strong hold features act as a visual deterrent to any intruders who dare to intrude.
- Available with decreased spacing, curved pales and splayed spear tips to discourage attempts to gain access.
- Tamper proof fasteners provide the highest level of security and versatility.
- Height is 2.6m as standard, but can be designed and custom built to clients specific requirements.
- Corrosion resistant with a choice of RAL colours.

### Applications

- Government facilities
- Power plants & sub stations
- Airports
- Data centres
- Ports of entry
- Military sites
- Industrial sites
