Alligator Teeth

Traffic Direction Enforcement

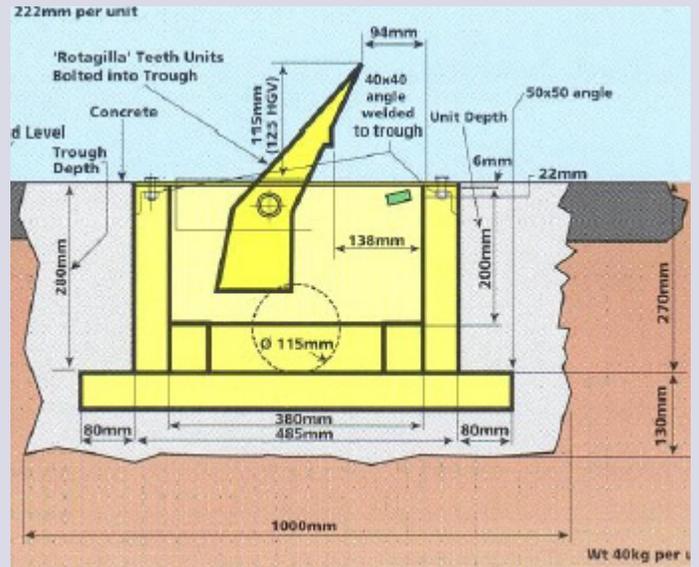

Features & Benefits

- Rotating blocks of steel - 50mm thick
- Lowered by tyres moving in approved direction
- Unlimited axle weight
- Rotagilla trough set into concrete and units are bolted into rotagilla fixing trough
- 100mm drainage system incorporated
- Cleaning and service without civil work
- Easy installation
- Safety 'Cats Eye' red reflectors
- High performance grease retentive bushes & grease points

Applications

- Airports
- Car parks
- Data centres
- Ports of entry
- Military sites
- Industrial sites

Specification for TDR-AT

The **TDR-AT** has been introduced to provide greater enforcement against drivers of 4x4 vehicles and others with large wheels who totally disregard conventional traffic flow plates. The unit is 222mm wide and the rotating blocks which raise to 115mm high are 50mm wide and are angled against reverse flow traffic.

The **ROTAGILLA TROUGHS** for fixing are easy to install and connected with 100mm pvc ducts to reduce installation time. Units can be removed for cleaning and servicing without civil work. Constructed from plate steel 115mm dia holes in ends for ducts.
