

Our Commitment to Net Zero

Breezemount Electrical & Hydraulics Ltd is committed to achieving Net Zero greenhouse gas emissions by 2050.

As a specialist engineering business operating across electrical, hydraulic, perimeter security and construction equipment sectors, we recognise our responsibility to reduce the environmental impact of our operations, supply chain and contract delivery.

We are committed to progressively reducing our greenhouse gas emissions through practical and measurable actions, including improving energy efficiency, reducing fuel consumption, transitioning our vehicle fleet towards lower-emission alternatives, reducing waste, improving resource efficiency and considering environmental factors within our procurement and supply-chain activities.

We have already begun taking steps to reduce our environmental impact and will continue to identify opportunities to improve energy efficiency and reduce emissions.

Our approach

Our Net Zero strategy is based on continuous improvement and measurable progress. We will:

- Measure and monitor our greenhouse gas emissions on an annual basis.
- Reduce energy consumption and improve the efficiency of our premises and operations.
- Increase the use of electric and other lower-emission vehicles where operationally practical.
- Reduce unnecessary business travel and improve journey planning.
- Reduce waste and increase recycling and resource efficiency.
- Work with suppliers and logistics providers to improve our understanding of supply-chain emissions.
- Consider carbon emissions and whole-life environmental impact within relevant purchasing decisions.
- Develop the environmental knowledge and skills of our employees.
- Progressively improve our measurement of Scope 3 emissions.
- Review our Carbon Reduction Plan annually and update our objectives and actions accordingly.

Our ultimate objective is to achieve Net Zero greenhouse gas emissions by 2050, while continuing to provide high-quality engineering, installation, maintenance and technical services to our customers.
